The NHS is responsible for 4.6% of the UK's carbon emissions. Climate change is impacting on the UK right now, with air pollution being responsible for 1 in 20 deaths in the UK, contributing to increases in asthma, cancer and heat disease, and with heat related deaths in older people rising by 54% worldwide in the last two decades. Research tells us that tackling climate change could save lives, through healthier diets (eating locally sourced, seasonal fresh fruit and veg), more active travel (swapping a drive for a walk or cycle, or public transport), and cleaner air. (Source: Lancet Planetary Health Journal, 2022) After reading this, to what extent do you support or oppose the NHS taking action to help tackle climate change?
