Scientists have identified genes that increase some people's risk of developing some forms of cancer. These can be tested for to identify people with a higher risk of developing that form of cancer later in life. Genetic tests are normally only offered to people with a family history of those types of cancer that have been linked to a particular gene.
Have you personally ever taken a genetic test to screen you for susceptibility towards a particular types of cancer?

$$
\begin{aligned}
& \text { Yes, I have } \\
& \text { No, I have not } \\
& \text { Don't know }
\end{aligned}
$$

Thinking about your own family history, are there any types of cancer you worry that your family may be particularly susceptible to?

Yes, there is a history of a particular type of cance in my family
No, there is no history of any particular type of cancer in my family

Not sure

More specifically, if a genetic test suggested
you had a very high chance of developing breast
cancer later in life, would you undergo a
preventative mastectomy (removing all the
natural breast tissue and replacing it with
implants) to avoid developing the disease?
[Asked to women only $n=972]$

| Definitely would | 32 | 33 | 29 | 19 | 36 | 36 | 30 | 28 | 0 | 32 | 24 | 24 | 38 | 34 | 28 | 36 | 21 | 33 | 36 | 32 | 33 |
