## YouGov

## background

This spreadsheet contains survey data collected and analysed by YouGov plc.
Methodology: This survey has been conducted using an online interview administered to members of the YouGov PIc panel of individuals who have agreed to take part in surveys. Emails are sent to panelists selected at random from the base sample. The e-mail invites them to take part in a survey and provides generic survey link. Once a panel member clicks on the link they are sent to the survey that they are most required for, according to the sample definition and quotas. (The sample definition could be "US adult population" or a subset such as "US adult females"). Invitations to surveys don't expire and respondents
 The profile is normally derived from census data or, if not available from the census, from industry accepted data
YouGov plc make every effort to provide representative information. All results are based on a sample and are therefore subject to statistical errors normally associated with sample-based information.

For further information about the results in this spreadsheet, please email uspress@yougov.com quoting the survey details
EDITOR'S NOTES - all press releases should contain the following information
All figures, unless otherwise stated, are from YouGov Plc. Total sample size was 1403 adults. Fieldwork was undertaken between 30th - 31st March 2020. The surver was carried out online. The figures have been weighted and are representative of all US adults (aged $18+$ ).

YouGov is registered with the Information Commissioner
YouGov is a member of the British Polling Council
Any percentages calculated on bases fewer than 50 respondents must not be reported as they do not represent a wide enough cross-section of the target population to be considered statistically reliable. These figures will be italicised.
