44. Setting CAFE standards

After the oil embargoes of the 1970s, the federal government established automobile fuel economy standards for manufacturers who sell cars in the United States. Some people say the current target set for the 2025 model year, an average of 54.5 miles per gallon for the fleet of cars each manufacturer sells, is too high and that it will lead to consumers paying higher prices for new cars. Other people say the target is right and will protect consumers and the overall economy from high gas prices as well as reduce air pollution. Do you think the federal government should increase or decrease future automobile fuel economy standards for new cars sold in the United States?
